

PALISADES FIRE DEBRIS CLEAN UP PHASE 1 **CLEAR HAZARDOUS MATERIAL**

Ash, debris and fire damage on homes that have been destroyed may contain hazardous materials that can threaten public health. Due to a declaration of a Local Health Emergency, **the removal of debris is prohibited** until an inspection of the debris is conducted by specially trained Federal, State, or local hazardous materials teams.

All properties are required to follow Phase 1 of the debris clean up prior to initiating burn debris removal to ensure proper disposal of Household Hazardous Waste and Asbestos-Containing Materials and to protect health and safety of workers and the community.

Hazardous Material Inspection and Removal (Phase I)

In **Phase I**, The City of Malibu in conjunction with Los Angeles County Fire HAZmat unit have organized teams of experts to inspect impacted properties and remove any household hazardous waste that may pose a threat to human health, animals, and the environment.

Residents are required to fill out the **Palisades Fire Access Agreement Permit for Residential Debris Removal on Private Property** in order to have their properties inspected. No fee is required for this assessment. Officials will post a yellow clearance placard on your property to indicate it is safe from hazardous materials. This service is for both residential and commercial properties.
