

The City of Malibu hosted a Malibu Fire Rebuilds Geotechnical Workshop on December 10, both in person and via Zoom, bringing together more than 40 licensed geotechnical and geological professionals to support ongoing fire rebuild efforts. Led by Community Development Director Yolanda Bundy, the workshop introduced the City's new geotechnical review consultants—Fenagh Engineering & Testing and NV5—and provided a direct roundtable forum to strengthen communication, clarify expectations, and align technical approaches for current and upcoming rebuild projects.

Attendees received an overview of the City's geotechnical review process and participated in an open discussion to share field observations, identify common challenges, and offer feedback to help streamline future reviews. The City emphasized the importance of continued collaboration with the professional community to enhance the review process and support as many families as possible in rebuilding their homes.
